

# SH-Backup Restore (Self-hosted)

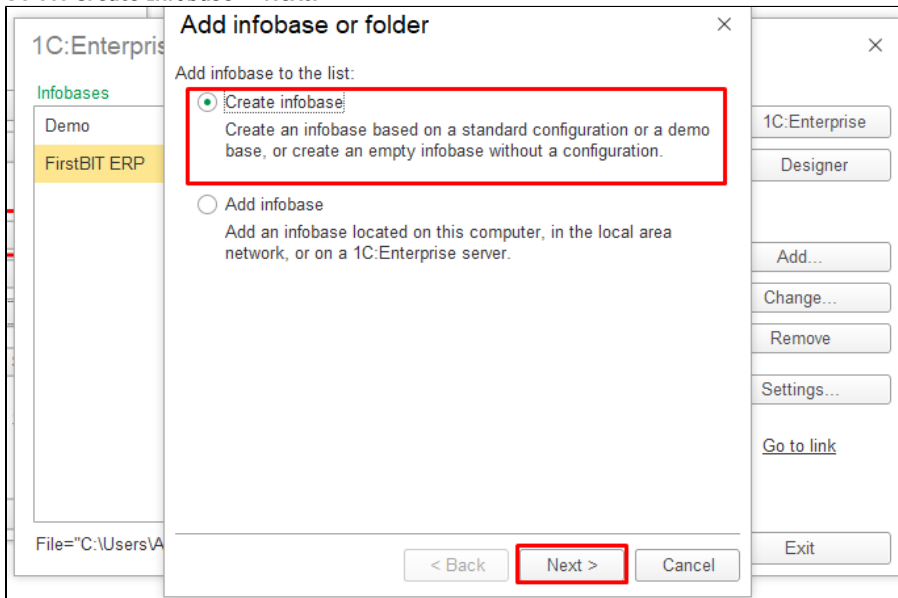

**Problem:** How to recover (restore) the database from a backup (self-hosted)?

**Solution:** Create an empty infobase and restore the database from a self-hosted backup into this infobase using 1C instruments as shown below.

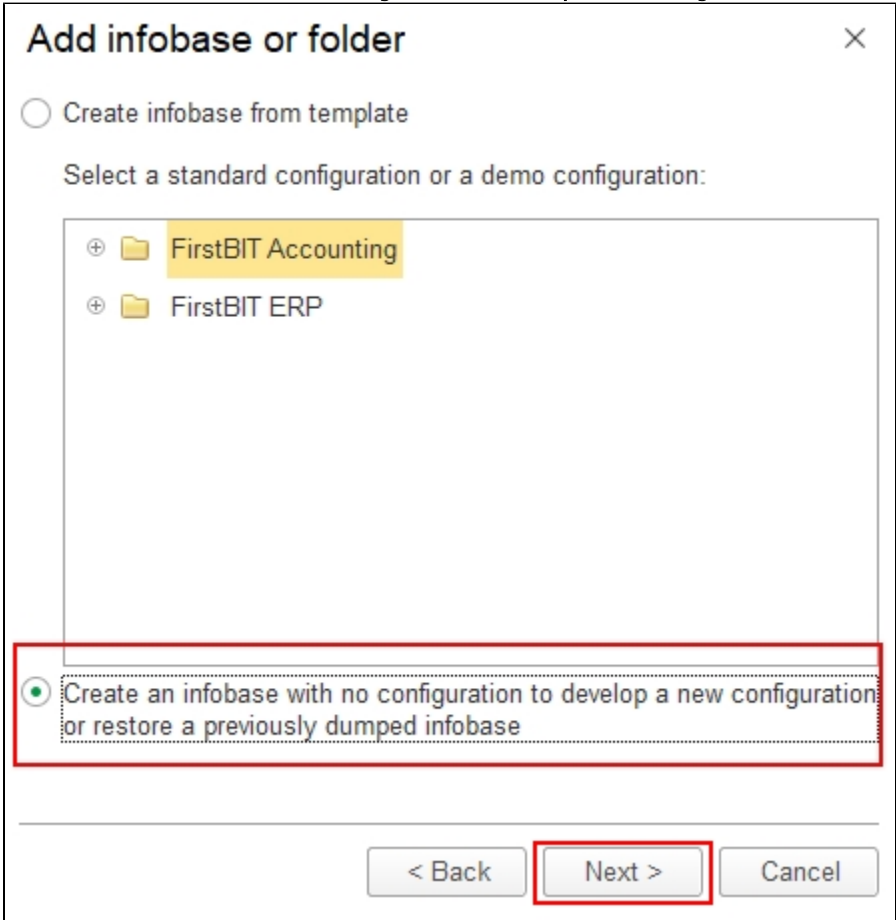

1. Open the Application on your desktop > click **Add**:

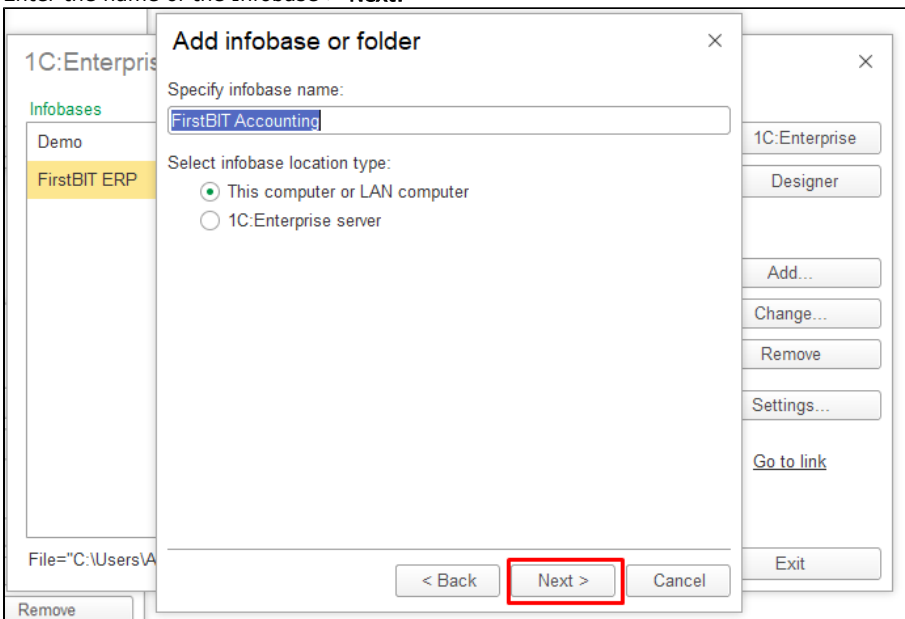

Select **Create Infobase** > **Next**:

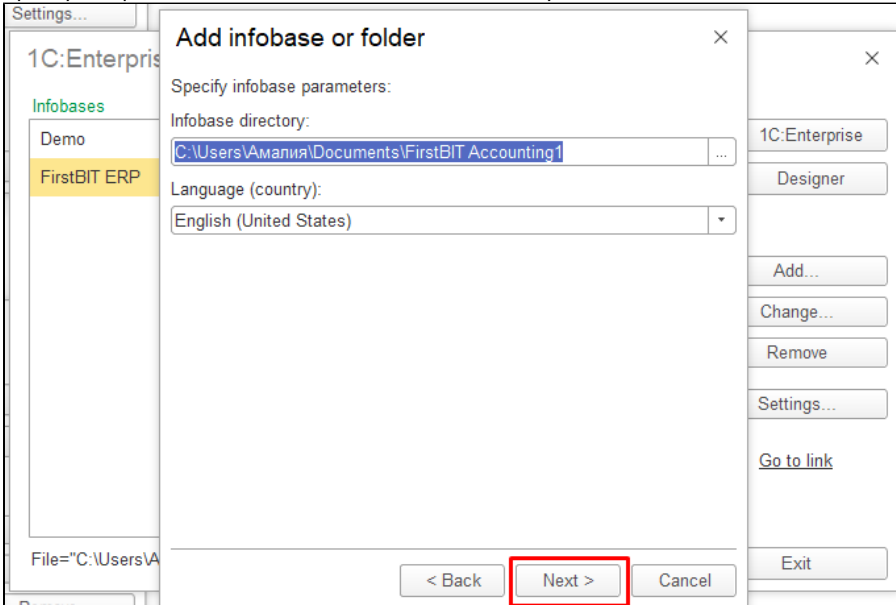

Choose **Create Infobase with no configuration** to develop a new configuration or restore a previously dumped infobase:

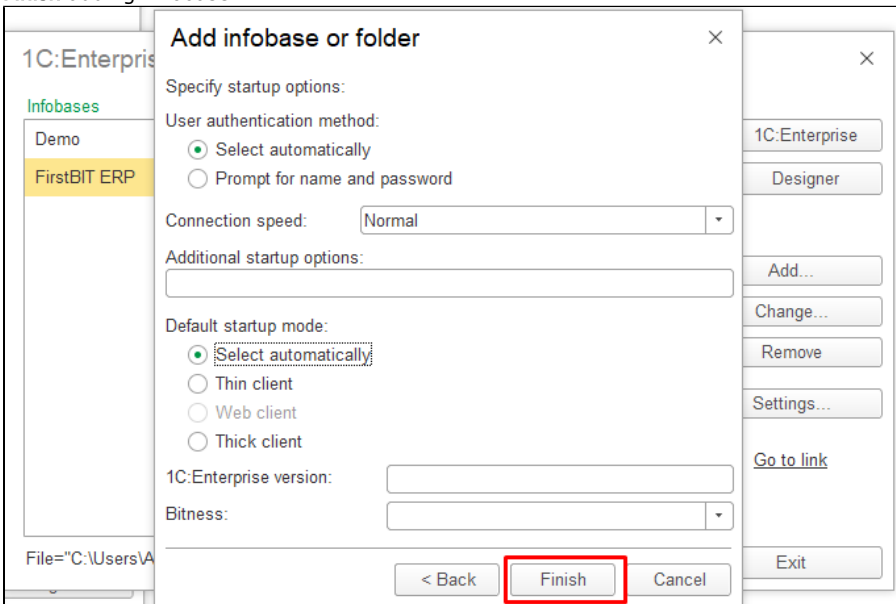

Enter the name of the Infobase > **Next**:

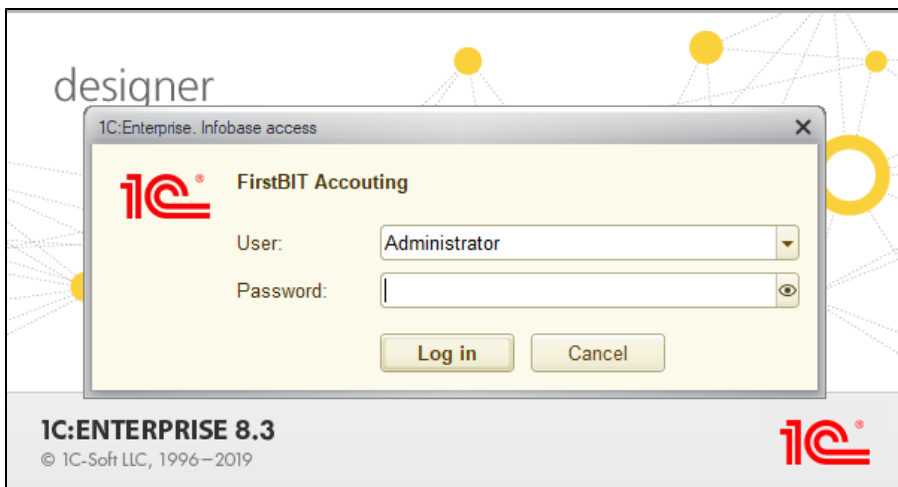

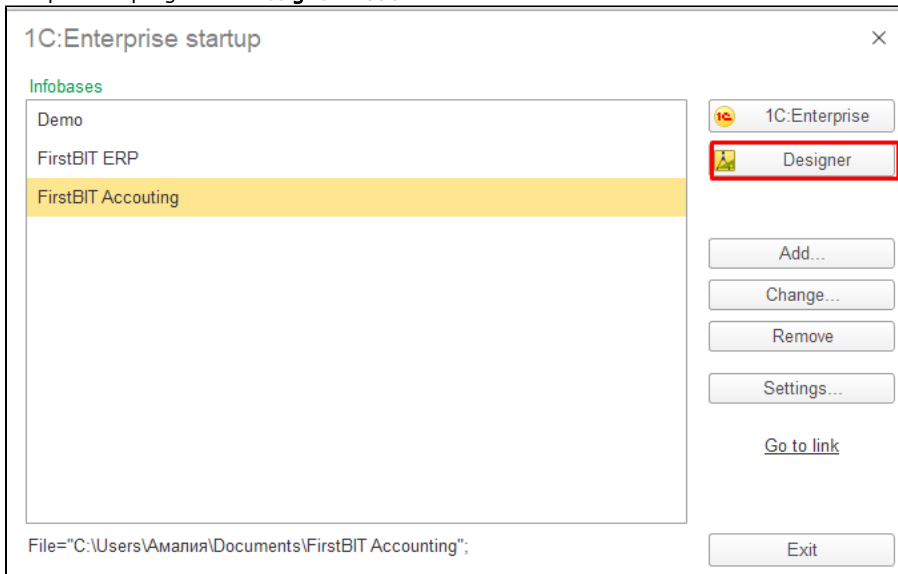

Specify the path or the software writes it automatically > **Next:**

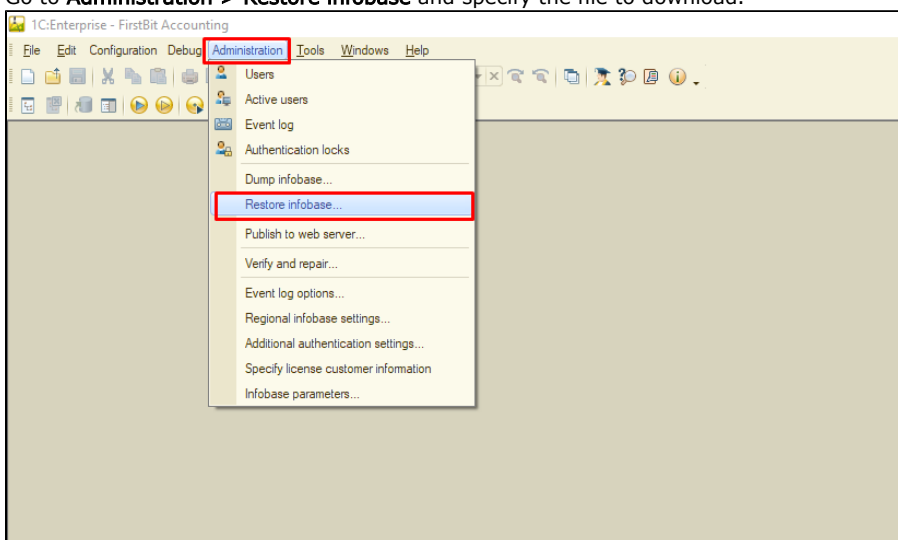

**Finish** adding Infobase:

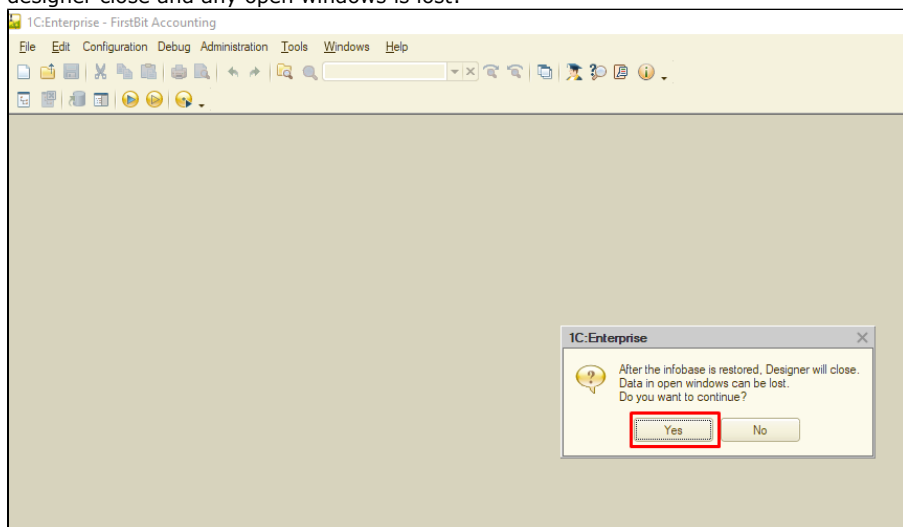

2. Open the program in **Designer mode**:

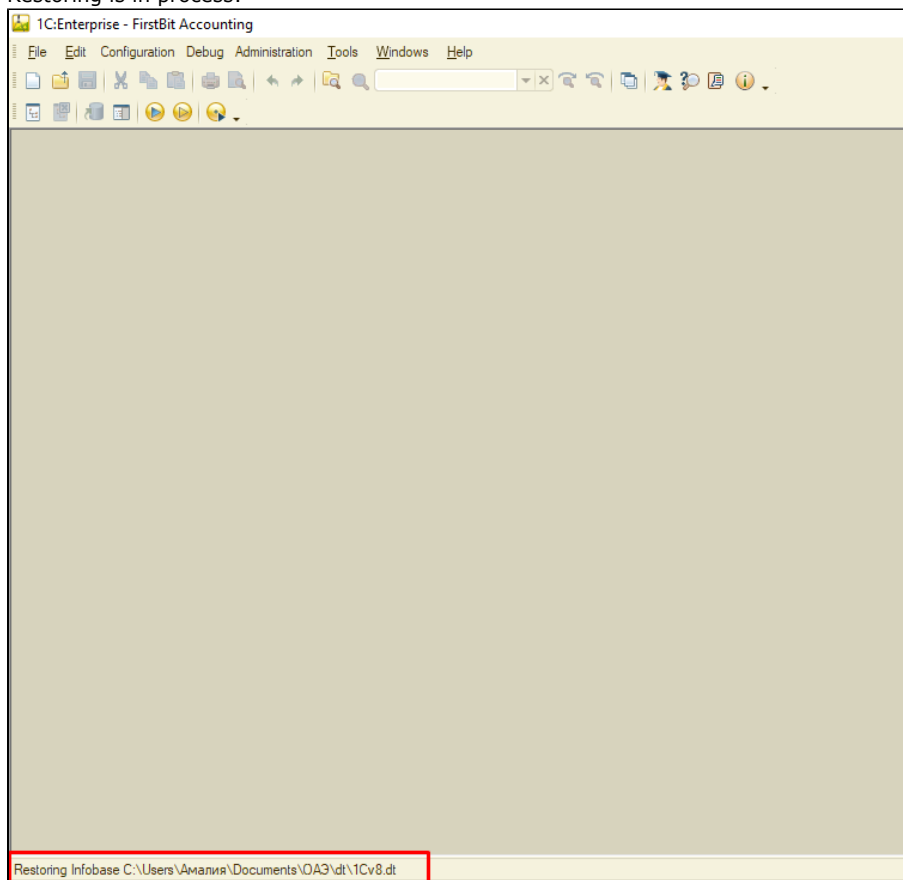

Go to **Administration > Restore infobase** and specify the file to download.

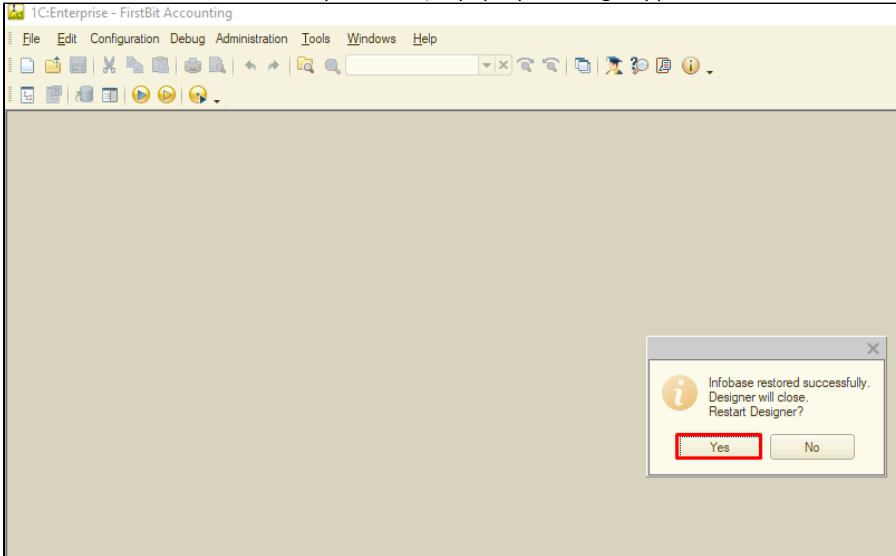

A pop-up message 'Do you agree to continue with the Infobase restoration?' appears informing that after the Infobase is restored, the designer close and any open windows is lost:

Restoring is in process:

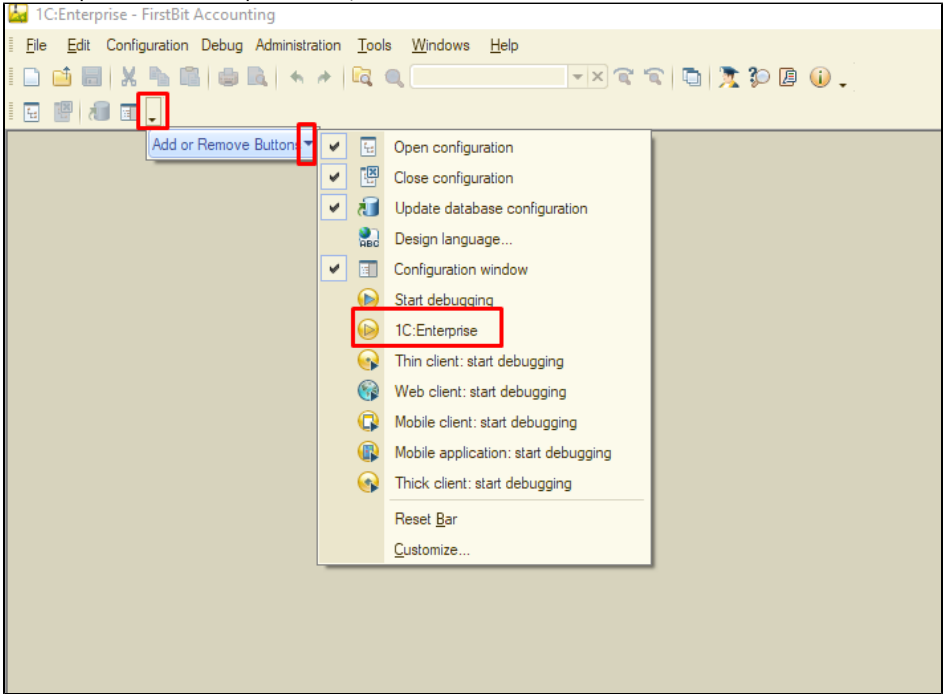

After the Infobase is successfully restored, a pop-up message appears:

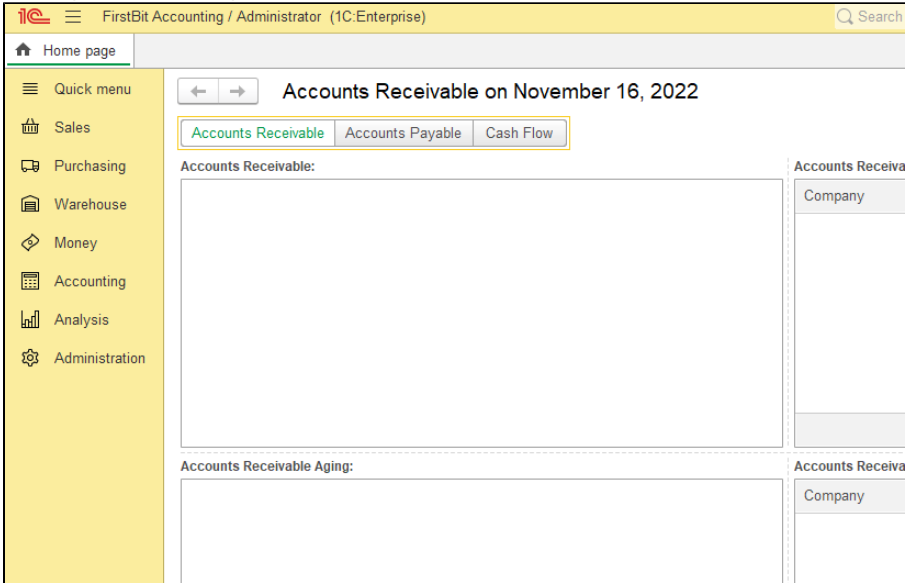

Once the *Designer* is reopened, navigate to the Enterprise section:

If Enterprise icon is not performed, then add it as shown below:

1C is opened and ready for use:

Thank you for being a FirstBIT customer!
