Authorized Signature

When generating a printed form with this transaction type - **Mutual Settlements Adjustment**, the Documents tab specifies the associated document, information about which will be displayed in the printed form.

For other transaction types of the document **Debit Note (Invoice correction/ Good return)**, this document does not require mandatory printing, since you receive this document from the supplier, who provides you with a printed form of this document. Therefore, since they are a supplier document, they had been eliminated from the 2.1.1.35 release and higher.
